COPYRIGHT AND TRADEMARKS

Copyright © 2020 Christie Digital Systems USA Inc. All rights reserved.

All brand names and product names are trademarks, registered trademarks or trade names of their respective holders.

GENERAL

Every effort has been made to ensure accuracy, however in some cases changes in the products or availability could occur which may not be reflected in this document. Christie reserves the right to make changes to specifications at any time without notice. Performance specifications are typical, but may vary depending on conditions beyond Christie's control such as maintenance of the product in proper working conditions. Performance specifications are based on information available at the time of printing. Christie makes no warranty of any kind with regard to this material, including, but not limited to, implied warranties of fitness for a particular purpose. Christie will not be liable for errors contained herein or for incidental or consequential damages in connection with the performance or use of this material. Manufacturing facilities in Canada and China are ISO 9001 certified. Manufacturing facilities in Canada are also ISO 14001 certified.

WARRANTY

Products are warranted under Christie's standard limited warranty, the complete details of which are available by contacting your Christie dealer or Christie. In addition to the other limitations that may be specified in Christie's standard limited warranty and, to the extent relevant or applicable to your product, the warranty does not cover:

a. Problems or damage occurring during shipment, in either direction.

b. Problems or damage caused by combination of a product with non-Christie equipment, such as distribution systems, cameras, DVD players, etc., or use of a product with any non-Christie interface device.

c. Problems or damage caused by misuse, improper power source, accident, fire, flood, lightning, earthquake, or other natural disaster.

d. Problems or damage caused by improper installation/alignment, or by equipment modification, if by other than Christie service personnel or a Christie authorized repair service provider.

e. Use of third party product enclosures for environmental protection during outside use must be approved by Christie.

f. Problems or damage caused by use of a product on a motion platform or other movable device where such product has not been designed, modified or approved by Christie for such use.

g. Except where the product is designed for outdoor use, problems or damage caused by use of the product outdoors unless such product is protected from precipitation or other adverse weather or environmental conditions and the ambient temperature is within the recommended ambient temperature set forth in the specifications for such product.

h. Defects caused by normal wear and tear or otherwise due to normal aging of a product.

The warranty does not apply to any product where the serial number has been removed or obliterated. The warranty also does not apply to any product sold by a reseller to an end user outside of the country where the reseller is located unless (i) Christie has an office in the country where the end user is located or (ii) the required international warranty fee has been paid.

The warranty does not obligate Christie to provide any on site warranty service at the product site location.

PREVENTATIVE MAINTENANCE

Preventative maintenance is an important part of the continued and proper operation of your product. Failure to perform maintenance as required, and in accordance with the maintenance schedule specified by Christie, will void the warranty.

REGULATORY

The product has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the product is operated in a commercial environment. The product generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of the product in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at the user's own expense. Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment

CAN ICES-3 (A) / NMB-3 (A)

ENVIRONMENTAL

The product is designed and manufactured with high-quality materials and components that can be recycled and reused. This symbol means that electrical and electronic equipment, at their end-of-life, should be disposed of separately from regular waste. Please dispose of the product appropriately and according to local regulations. In the European Union, there are separate collection systems for used electrical and electronic products. Please help us to conserve the environment we live in!

Safety precautions

Learn about the safety precautions related to the Christie CP2320-RGB projector. This projector is intended for use in a cinema environment.

General safety precautions

Read all safety and warning guidelines before installing or operating the projector.

**Warning!** If not avoided, the following could result in death or serious injury.

- TRIP OR FIRE HAZARD! Position all cables where they cannot contact hot surfaces, be pulled, be tripped over, or damaged by persons walking on or objects rolling over the cables.
- This product must be installed within a restricted access location not accessible by the general public.
- Only personnel who are trained on the precautions for the restricted access location can be granted entry to the area.
- Install the product so users and the audience cannot enter the restricted area at eye level.
- ELECTRICAL and BURN HAZARD! Use caution when accessing internal components.
- High leakage current present when connected to IT power systems.
- FIRE AND SHOCK HAZARD! Use only the attachments, accessories, tools, and replacement parts specified by Christie.
- FIRE HAZARD! Do not use a power cord, harness, or cable that appears damaged.
- HAZARDOUS SUBSTANCE! Use caution when handling the product as it contains ethylene glycol. Do not ingest coolant. For information on safe handling, refer to the Safety Data Sheet (SDS) for the coolant.
- A minimum of four people or appropriately rated lift equipment is required to safely lift, install, or move the product.
- Do not install or operate the projector in any position that does not meet the stated product specifications for alignment and orientation.

**Caution!** If not avoided, the following could result in minor or moderate injury.

- Only Christie qualified technicians are permitted to open product enclosures.
Laser safety precautions

Read all safety and warning guidelines before operating the projector laser.

**Warning!** If not avoided, the following could result in death or serious injury.

- Do not operate the cinema projector without all of its covers in place.
- LASER RADIATION HAZARD! This projector has a built-in Class 4 laser module. Never attempt to disassemble or modify the laser module.
- Do not look directly into the lens when the light source is on. The extremely high brightness can cause permanent eye damage.
- Possible hazardous optical radiation emitted from this product. (Risk group 3)

AC/power precautions

Read all safety and warning guidelines before connecting to AC power.

**Warning!** If not avoided, the following could result in death or serious injury.

- SHOCK HAZARD! Only use the AC power cord provided with the product or recommended by Christie.
- FIRE AND SHOCK HAZARD! Do not attempt operation unless the power cord, power socket, and power plug meet the appropriate local rating standards.
- SHOCK HAZARD! Do not attempt operation if the AC supply is not within the specified voltage and current, as specified on the license label.
- SHOCK HAZARD! The AC power cord must be inserted into an outlet with grounding.
- SHOCK HAZARD! A dedicated, protected ground or earth wire must be installed on the product by Christie qualified technicians or electricians before it can be connected to power.
- SHOCK HAZARD! Disconnect the product from AC before installing, moving, servicing, cleaning, removing components, or opening any enclosure.
- Install the product near an easily accessible AC receptacle.
- Always connect the ground or earth first to reduce shock hazard.
- A certified electrician must be present during installation to ensure the installation meets the local electrical code.

**Caution!** If not avoided, the following could result in minor or moderate injury.

- Use an appropriately sized strain relief connector with the knockout plate provided, to ensure adequate environmental sealing and to prevent the AC supply cable from accidentally being torn out or rubbing against the knockout plate.
- FIRE HAZARD! Do not use a power cord, harness, or cable that appears damaged.
- FIRE OR SHOCK HAZARD! Do not overload power outlets and extension cords.
- SHOCK HAZARD! Power supply uses double pole/neutral fusing.
Light intensity hazard distance

This projector has been classified as Risk Group 3 as per the IEC 62471:2006 standard due to possible hazardous optical and thermal radiation being emitted.

**Warning!** If not avoided, the following could result in serious injury.

- **PERMANENT/TEMPORARY BLINDNESS HAZARD!** No direct exposure to the beam must be permitted. Class 1 Laser Product - Risk Group 3 according to IEC 60825-1:2014 and IEC 62471:2006.

- **PERMANENT/TEMPORARY BLINDNESS HAZARD!** Operators must control access to the beam within the hazard distance or install the product at the height that prevents exposure of spectators' eyes within the hazard distance. The hazard zone must be no lower than 2.5 meters (US installations) or 2.0 meters (global installations) above any surface upon which any persons are permitted to stand and the horizontal clearance to the hazard zone must be a minimum 1.0 meters.

- **EXTREME BRIGHTNESS!** Do not place reflective objects in the product light path.

The following diagram and table show the zones for ocular and skin hazard distances:

- **A**—Hazard zone. The region of space where the projection light from the laser-illuminated projector is above emission limits for Risk Group 2. The light intensity may cause eye damage after a momentary or brief exposure (before a person can avert his or her eyes away from the light source). The light may cause skin burns to occur.

- **B**—Hazard distance. Operators must control access to the beam within the hazard distance or install the product preventing potential exposure of the spectators' eyes from being in the hazard distance.

- **C**—No access zone. Horizontal clearance of the no access zone must be a minimum of 1.0 meters.

- **D**—Vertical distance to hazard zone. The hazard zone must be no lower than 2.5 meters (US installations) or 2.0 meters (global installations) above any surface upon which any persons are permitted to stand.

- **E**—Represents the top view of the projector.
• F—Represents the side view of the projector.

The following table lists the hazard distance for the Christie projector lens with the zoom adjusted to its most hazardous position.

## CP2315-RGB and CP2320-RGB

### For Installations in the United States

The following must be in place for laser-illuminated projector installations in the United States:

- The projection room shall be clearly identified by the posting of laser warning and restricted access signs, and by restricting entry through physical means. The projection room sign must display the warning "No direct exposure to beam shall be permitted".
- The Christie Laser Projection System Installation Checklist must be fully completed after the installation and sent to lasercompliance@christiedigital.com. A copy can remain on-site. This checklist can be found as a separate document in the accessory box with the manual.
- Certain US states have additional laser regulatory requirements. Go to [www.christiedigital.com](http://www.christiedigital.com) for additional regulatory requirements.

## Product labels

Learn about the labels that may be used on the product. Labels on your product may be yellow or black and white.

### General hazards

Hazard warnings also apply to accessories once they are installed in a Christie product that is connected to power.

#### Fire and Shock Hazard

<table>
<thead>
<tr>
<th>Icon</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="fire.png" alt="Fire" /> <img src="shock.png" alt="Shock" /></td>
<td>To prevent fire or shock hazards, do not expose this product to rain or moisture. Do not alter the power plug, overload the power outlet, or use it with extension cords. Do not remove the product enclosure.</td>
</tr>
</tbody>
</table>
## Safety precautions

### Fire and Shock Hazard

Only Christie qualified technicians are authorized to service the product.

### Electrical Hazard

<table>
<thead>
<tr>
<th>Icon</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>⚡</td>
<td>Risk of electric shock.</td>
</tr>
<tr>
<td>⚡</td>
<td>Do not remove the product enclosure.</td>

<td>Only Christie qualified technicians are authorized to service the product.</td>
</tr>
</tbody>
</table>

General hazard.

Electrocution hazard. To avoid personal injury, always disconnect all power sources before performing maintenance or service procedures.

Hot surface hazard. To avoid personal injury, allow the product to cool for the recommended cool down time before performing maintenance or service.

Burn hazard. To avoid personal injury, allow the product to cool for the recommended cool down time before performing maintenance or service.

Optical radiation hazard. To avoid personal injury, never look directly at the light source.

Moving parts hazard. To avoid personal injury, keep hands clear and loose clothing tied back.

Fan hazard. To avoid personal injury, keep hands clear and loose clothing tied back. Always disconnect all power sources before performing maintenance or service procedures.

Laser hazard. To avoid personal injury, avoid eye or skin exposure to direct or scattered radiations.

Voltage hazard. To avoid personal injury, always disconnect all power sources before performing maintenance or service procedures.

Not for household use.
Mandatory action

Disconnect all power sources before performing maintenance or service procedures.

Consult the user manual.

Consult the service manual.

Disconnect all power sources before performing maintenance or service procedures.

Electrical labels

Indicates the presence of a protective earth ground.

Indicates the presence of an earth ground.

Additional hazards

Indicates high leakage current. Earth or ground connection essential before connecting the power supply.

Indicates a light hazard. Do not look directly into the lens. The extreme high brightness can cause permanent eye damage. RG2 IEC 62471-5:2015

Laser hazards

FDA laser variance (US projectors only)

**CP2315-RGB and CP2320-RGB**

CLASS 1 LASER PRODUCT IEC 60825-1:2014

Wavelengths: 450 nm - 656 nm
Indicates a light hazard. Do not look directly into the lens. The extreme high brightness can cause permanent eye damage.

Class 1 Laser Product - Risk Group 3 according to IEC 60825-1:2014 and IEC 62471:2006

Indicates Class 4 laser radiation when open. Avoid eye or skin exposure to direct or scattered radiation.
Introduction

This manual is intended for professionally trained operators of Christie high-brightness CP2320-RGB projection systems.
For complete production documentation and technical support, go to www.christiedigital.com.

Product documentation

For installation, setup, and user information, see the product documentation available on the Christie Digital Systems USA Inc. website. Read all instructions before using or servicing this product.

1. Access the documentation from the Christie website:
   - Scan the QR code using a QR code reader app on a smartphone or tablet.

2. On the product page, select the model and switch to the Downloads tab.

Related documentation

Additional information on the projector is available in the following documents.

- Cinema 2K-RGB Service Guide (P/N: 020-102770-XX)
- CineLife Serial Commands Guide (P/N: 020-102774-XX)
- CP2320-RGB Specifications Guide (P/N: 020-102777-XX)

List of components

Verify that all components were received with the projector.

- Touch panel, touch panel harness, and panel mounting arm
- High security key to open the projector service access door

An optional UPS inlet power cord is also available. For information on available accessories, see CP2320-RGB Specifications Guide (P/N: 020-102777-XX).

Key features

Understand the important features of the projector.

- Solid-state Christie RealLaser™ RGB laser illumination
- Three-chip 0.98 inch CFB DC2K light engine
- Christie CineLife™ Series 3 electronics
- LiteLOC™ color lock feature for constant image brightness and color
• Direct-coupled laser module integrated in the projector chassis
• Compact form to fit in existing projection booths
• Exhaust air extraction (using optional accessory)

Contact your dealer

Record the information about your installation and keep this information with your records to assist with any servicing of your product. If you encounter a problem, contact your dealer.

Installing and setting up

Learn how to position and install the projector.

Site requirements

To safely install and operate the CP2320-RGB projector, the installation location must meet these minimum requirements.

Physical operating environment

- Ambient temperature (operating) 10°C to 35°C (50°F to 95°F)
- Humidity (non-condensing) 10% to 80%
- Operating altitude 0 to 3000 meters (0 to 9843 feet)
  In China, the operating altitude is 0 to 2000 meters (0 to 6562 feet)

External exhaust ducting

Sufficient ventilation is required around the projector to regulate the temperature of the internal laser module. If necessary, air intake and exhaust HVAC ducts can be installed.

An exhaust duct is also available for purchase as an optional accessory (P/N: 163-112105-XX). Instructions for installing the exhaust duct are included with the accessory part.

The installation site must provide an airflow 450 cubic feet per minute (CFM) at 1 to 1000 meters elevation, and must accommodate a heat load of 5118 BTU/hr.

For each additional 1000 meters above sea level, increase the airflow (CFM) value by 15%. If an extraction duct is not used, the operating temperature range is restricted to 10°C to 25°C at a maximum altitude of 3000 meters.

Permanent power connection

The projector must be connected to power using a hard-wired connection. The projector light source requires the permanent AC connection to operate. There is also an available connector for an uninterruptible power supply (UPS) to provide backup power for the projector electronics only.

Certified wall breakers are required as part of the installation. Breakers must be part of the building and easily accessible. The size of the breaker is determined from the power requirements of the projector and can be up to 30A maximum for the main input and up to 20A maximum for the UPS input.

Preparing the installation site

Ensure the installation area is ready for the components.

1. Clear the installation area.
2. Post laser hazard warning signs at all entry doors.
3. Place each component near its installation location.

**Lifting and positioning the projector**

Safely lift and position the projector in the location where it will be used.

**Warning!** If not avoided, the following could result in death or serious injury.

- A minimum of four people or appropriately rated lift equipment is required to safely lift, install, or move the product.
- Do not install or operate the projector in any position that does not meet the stated product specifications for alignment and orientation.

This product must be installed in a landscape orientation, with all four feet supported on a level surface. Do not install or operate the projector in an inverted position. If your site has any installation requirements other than a typical theater projection booth, contact Christie for assistance.

Before lifting and positioning the projector, refer to the light intensity hazard distances.

1. Position each person at the corners of the projector.
2. Place both hands under the corner, grasping the projector frame.
   - Do not lift the projector using any feature on the projector skin, such as the skin louvers or lens opening.
3. Lift up the projector and move it to the location where it will be used.
4. Position the projector so it is centered and parallel with the theater screen. If space is limited, aim the projector slightly off-center and use lens offset to center the image on the screen.

**Related information**

*Light intensity hazard distance* (on page 7)

**Connecting to power**

The projector must be connected to power using a hard-wired connection.

The projector light source requires a permanent AC connection to operate. An uninterruptible power supply (UPS) to provide backup power for the projector electronics only is also available. When connecting the projector to AC power, follow all electrical codes for your location.
Warning! If not avoided, the following could result in death or serious injury.

- Always connect the ground or earth first to reduce shock hazard.
- FIRE HAZARD! Do not use a power cord, harness, or cable that appears damaged.
- FIRE AND SHOCK HAZARD! Do not attempt operation unless the power cord, power socket, and power plug meet the appropriate local rating standards.
- SHOCK HAZARD! Do not attempt operation if the AC supply is not within the specified voltage and current, as specified on the license label.
- SHOCK HAZARD! A dedicated, protected ground or earth wire must be installed on the product by Christie qualified technicians or electricians before it can be connected to power.
- A certified electrician must be present during installation to ensure the installation meets the local electrical code.

Caution! If not avoided, the following could result in minor or moderate injury.

- Use an appropriately sized strain relief connector with the knockout plate provided, to ensure adequate environmental sealing and to prevent the AC supply cable from accidentally being torn out or rubbing against the knockout plate.

- A certified wall circuit breaker is required. It must be part of the building and easily accessible.
- Use a minimum of 12 AWG copper wire, grounding included, for the connection of the main AC supply to the projector's ground lug.
- Either copper or aluminum is acceptable as conductor wiring material to the terminal block.

1. Remove the four screws holding the AC receptacle knockout plate.

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>200-240 V main inlet</td>

</tr>
<tr>
<td>C</td>
<td>UPS circuit breaker</td>
</tr>
<tr>
<td>D</td>
<td>MAIN input circuit breaker</td>
</tr>
</tbody>
</table>
The AC supply is routed to the terminal block through an appropriate strain relief mounted on this knockout plate.

2. To open the AC input area of the projector, remove the four screws holding the cover and swing the cover downwards to open it.

3. Taking the approved line cord for your location, strip the cable jacket to expose a 100 mm length of the bundled wires.

4. Cut the Line (black or brown) and Neutral (white or blue) wires to shorten them to a length between 60 to 70 mm.

5. Using a wire stripper, strip the insulation from each individual wire to expose 10 mm of bare wire on the end.

6. Pass the wires through the strain relief on the knockout plate and through the AC input cover.

7. Fasten the bare end of the wires into the Ground (G), Line (L), and Neutral (N) terminal block connectors, starting first with the Ground (green) connection, followed by the Line (black or brown) and Neutral (white or blue) connections.
8. Lift the AC input cover into place and re-attach it using the four screws.
9. Using the four screws, re-attach the knockout plate and ensure the appropriate strain relief is in place.

Connecting to an uninterruptable power supply

An uninterruptible power supply (UPS) allows the cinema projector head electronics to remain operable during a power failure.

**Warning!** If not avoided, the following could result in death or serious injury.

- SHOCK HAZARD! The AC power cord must be inserted into an outlet with grounding.

The following table lists the part numbers for the optional UPS power cords for each region.

<table>
<thead>
<tr>
<th>Power Cord Description</th>
<th>Part Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>North America 125V/15A</td>
<td>108-382104-XX</td>
</tr>
<tr>
<td>Japan 125V/12A</td>
<td>108-371102-XX</td>
</tr>
<tr>
<td>China 250V/10A</td>

<td>108-392105-XX</td>
</tr>
</tbody>
</table>
1. Remove the projector touch panel.
2. Remove the rear cover of the projector by unscrewing the four captive screws.

3. Between the exhaust fans and the AC box assembly, disconnect the MAIN input plug from the IN-LINE receptacle.
4. Remove the protective cap from the UPS input plug.
5. Connect the UPS input plug to the IN-LINE receptacle connector.

6. Place the protective cap from the UPS plug on the MAIN input plug.
7. Reinstall the rear panel of the projector.
8. Reinstall the projector touch panel.
9. Plug in the appropriate UPS power cord to the UPS and then into the UPS input (Input B) on the projector.

Installing the lens

The lens seals the projection head, preventing contaminants from entering the main electronics area. Before installing the lens, ensure that you turn off and unplug the projector. Do not operate the projector without a lens installed. Install a lens plug when you install or transport the projector.

1. On the front of the projector, move the lens clamp to the open position.

2. Position the lens so the lens retaining ring mounts align with the lens mount.

3. Remove the lens caps from the front and rear of the lens.
   
   Lens caps must be removed or they can melt and damage the lens.

4. Insert the lens straight into the lens mount opening without turning. Magnets inside the lens mount help position the lens.

5. Lock the lens assembly in place by rotating the lens clamp downward.
Installing the touch panel

The touch panel controls projector functions and provides quick access to projector information.

The touch panel is mounted on the rear cover of the projector.

1. Remove the touch panel and the mounting arm from their packaging.
2. Attach one end of the touch panel mounting arm over the ball joint on the rear of the touch panel.

<table>
<thead>
<tr>
<th></th>
<th>Mounting arm</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td></td>
</tr>
<tr>
<td>B</td>
<td>Ball joint</td>
</tr>
</tbody>
</table>

3. While supporting the touch panel, fit the other end of the touch panel mounting arm over the ball joint on the rear panel or electronics side of the projector.

4. Tighten the mounting arm until it fits tightly on the ball joint.

5. Connect the touch panel harness to the touch panel:
a) Connect one end of the USB cable to the USB port on the rear of the touch panel.
b) Connect one end of the touch panel power cable to the **DC IN 12V** port on the rear of the touch panel.
c) Connect one end of the VGA connector to the **VGA** port on the rear of the touch panel.

6. Connect the touch panel harness to the projector:
   a) Connect the other end of the USB cable to a USB port on the projector communications panel.
   b) Connect the other end of the touch panel power cable to the Screen Power port on the projector communications panel.
   c) Connect the other end of the VGA connector to the VGA Out port on the projector communications panel.

7. To turn the touch panel on, press the power button on the top of the panel.
   If the projector is not connected to AC power with breakers in the ON position, you cannot turn the touch panel on.

### Projector power modes

The CP2320-RGB projectors track laser operation hours for the laser optical sub-system (LOS).
The projector operates with the following power modes:

<table>
<thead>
<tr>
<th>Mode</th>
<th>Description</th>
</tr>
</thead>
</table>
| **Projector on** | • CineLife™ electronics and light engine are on  
                  • Laser optical sub-system (LOS) and thermo-electric cooler (TEC) devices are off |
| **Light source on** | • CineLife™ electronics and light engine are on  
                          • LOS and TEC are on  
                          • Fans run at full speed |
| **Standby** | • CineLife™ electronics remain on standby with the light engine off  
                    • LOS and TEC are off  
                    • Fans run at reduced speed |

### Turning the projector on or off

Turn on the projector to display content, or turn off the projector to conserve energy or service the projector.

To operate the projector, the circuit breakers must be in the ON position. If you are servicing the projector or removing the protective covers, ensure that the MAIN and UPS circuit breakers are in the off position.

In the right toolbar, tap and hold **Power**.

If the light source is on when turning off the projector, the light source enters a ten-minute cool-down period automatically.
Logging on to the projector

Log on to the projector to access projector menus.

1. Tap Login.
2. In the User list, select a user name.
3. Enter your password.
4. Tap Login.

Turning the light source on or off

Turn the light source on to display content or view test patterns, turn the light off to extend the life of the lasers.

- To turn the light source on or off, in the right toolbar, tap and hold Light.
  
  If you turn on the light source when the projector power is off, power is turned on automatically.
  Allow the projector to cool down for 10 minutes after turning it off.

Activating marriage

You must complete marriage to display content and to comply with the Digital Cinema Initiatives (DCI) specification.

For more information on marriage, refer to CP2320-RGB User Guide (P/N: 020-102769-XX).

You cannot complete marriage remotely.

1. In the left navigation menu, tap Service Setup > Marriage Setup.
2. Tap Start and complete the Marriage Setup wizard.
3. Tap Finish.
4. Verify that the marriage ring is installed correctly and an anti-tamper alarm does not appear on the touch panel.

Completing the installation checklist

Complete the provided installation checklist (P/N: 020-103137-XX) and return it to Christie.
Connecting devices and establishing communication

To display content, you must connect a device that is capable of storing or playing content to the projector.

Connecting the projector to a network

The CP2320-RGB projectors can be connected to various media devices and wired networks.

For detailed information on connecting the projector to a device or network, see the CP2320-RGB User Guide (P/N: 020-102769-XX).

Connecting the devices to the 3D port

For information on connecting devices to the 3D port on the projector, refer to the product documentation for the device you are using.
Managing the light source

Learn how to configure a laser file and use the projector's LiteLOC™ feature. The laser file allows you to control the power settings of the red, green, and blue (RGB) lasers. The LiteLOC™ feature ensures that color and brightness are held at the level you set. You can create multiple laser files to manage varying screen sizes, brightness requirements, room temperatures in the projection booth, and types of content (such as 2D, 3D, and alternative content).

Creating a new laser file

Create a laser file to store the power settings for the RGB laser light source and the maximum expected room temperature for the projection booth.

The maximum (MAX) power limit for Red and Green changes according to the value set for the maximum expected room temperature. For Red, Green, and Blue power levels, system stability may be affected if levels are set below the minimum (MIN) power limit shown.

To ensure color and brightness are held at the required levels for your installation, Christie recommends that you enable LiteLOC™ for each laser file you create.

When refining the laser power settings, the amount of time required to re-stabilize the projector depends on the size of the adjustment. For very small adjustments to the expected room temperature...
or power settings, the projector requires only 1 or 2 minutes to re-stabilize. For larger adjustments, the projector may require up to 15 minutes to re-stabilize.

1. In the left navigation pane, tap **Laser Settings > Laser Power/LiteLOC Setup**.
2. To activate the controls, tap the **Display White Test Pattern** slider.
3. To create a new laser file, tap **Create**.
4. In the Create dialog, type a name for the new laser file and tap **Create**.
5. If the laser file will be associated with a 3D channel, tap the **3D Sync** slider.
6. Under Maximum Expected Room Temperature, tap the plus and minus signs (or drag the temperature slider) to indicate the maximum expected room temperature in the projection booth.

   The system uses the maximum expected room temperature to calculate the light output. The default maximum expected room temperature setting is 25° C. A lower room temperature generally results in increased brightness and better efficiency. A higher room temperature will reduce the maximum power setting available for the lasers. The maximum expected room temperature setting must reflect actual operating conditions.

   If you set a maximum expected room temperature that is below the existing ambient room temperature, the system displays a warning.

7. Set the approximate Red, Green, and Blue power levels as required for your projection environment and allow the projector to stabilize for 15 minutes.

   System stability may be affected if you set a power level below the minimum power level recommended.

   When setting the Red or Green power level, Christie recommends setting a level below the maximum (MAX) limit shown. A value below the maximum limit ensures an optimal brightness that can be maintained over time.

8. If color or brightness is not at the target level, refine the Red, Green, and Blue power settings to achieve the target, and then allow the projector to re-stabilize for an additional 3 to 5 minutes.

   The projector is considered stable when there are no further adjustments and you obtain the same screen state results after two sets of measurements, 5 minutes apart.

9. Once the correct color and brightness are achieved and the projector has stabilized, tap the **LiteLOC** slider to lock the settings.

   The color of the slider turns to green to indicate the settings are locked. The projector’s LiteLOC™ system maintains the brightness and color levels.

10. To save the new laser file, tap **Save**.

    Color sensor (CSense) data are displayed on the interface to provide feedback on the current color sensor information.

### Modifying an existing laser file

Modify the settings in the laser file to change the laser power settings or the maximum expected room temperature.

When refining the laser power settings, the amount of time required to re-stabilize the projector depends on the size of the adjustment. For very small adjustments to the expected room temperature...
or power settings, the projector requires only 1 or 2 minutes to re-stabilize. For larger adjustments, the projector may require up to 15 minutes to re-stabilize.

1. In the left navigation pane, tap Laser Settings > Laser Power/LiteLOC Setup.
2. To begin modifying the settings, tap the Display White Test Pattern slider.
3. From the Laser File list, select the laser file to edit.
4. To unlock the file, tap the LiteLOC slider.
   The color of the slider turns to gray to indicate the settings are unlocked.
5. Adjust the Maximum Expected Room Temperature and the power levels for Red, Green, and Blue as required to achieve the correct color and brightness on screen.
6. Once the correct color and brightness are achieved and the projector has stabilized, tap the LiteLOC slider to lock the settings.
   The color of the slider turns to green to indicate the settings are locked.
7. To save the new settings, tap Save.

Copying existing laser settings to a new file

Copy an existing laser file when you want to create a new file with similar settings.

1. In the left navigation pane, tap Laser Settings > Laser Power/LiteLOC Setup.
2. Tap the Display White Test Pattern slider.
3. From the Laser File list, select the file you want to copy.
4. To save the new laser file, tap Save As.
5. Type a new name for the laser file and then tap Save.
6. Adjust the maximum expected temperature and power settings as required for the new configuration.

Deleting a laser file

Delete a laser file when the configuration is no longer required.

1. In the left navigation menu, tap Laser Settings > Laser Power/LiteLOC Setup.
2. Tap the Display White Test Pattern slider.
3. In the Laser File list, select the file to delete.
4. Tap Delete.
5. To confirm the deletion, tap Delete.
Adjusting the image

Learn how to adjust image geometry so it displays correctly.

Calibrating the Intelligent Lens System

On CP2320-RGB projectors, the Intelligent Lens System (ILS) is activated by default.

Use the Auto Calibrate feature of the ILS to find and compensate for motor backlash, and to determine the movement range for the currently installed lens.

1. In the left navigation menu, tap Image Settings > ILS File Setup.
2. From the ILS File list, select an available ILS file.
3. Tap Auto Calibrate.
4. Tap Continue.
   The system performs the lens calibration.

Correcting vignetting

An image that is brighter at the center than it is at the sides needs vignetting correction.

If your image suffers from vignetting, the lens has reached the end of its offset travel range.

If your installation does not allow the image to be centered with the center of the screen, move the entire projector in the direction of lens travel.

Adjusting tilt and leveling the projector

To ensure optimum performance, install the projector so it is centered and parallel with the screen.

To compensate for tilt or offset, you can adjust the projector feet and the lens mount position.

This product must be installed in a landscape orientation, with all four feet supported on a level surface. Do not install or operate the projector in an inverted position. If your site has any installation requirements other than a typical theater projection booth, contact Christie for assistance.

The front-to-back tilt of the projector must not exceed 15° in a downward direction or 5° in an upward direction. The side-to-side tilt must be within +3° to -3° of level.

1. To adjust the height of the projector, loosen the lock nut on the adjustable feet on the bottom of the projector.
A 19 mm (0.75 in.) wrench
B Lock
C Turn to adjust height

2. Extend or retract the feet.
3. When the adjustment is correct, tighten the lock nut.

Correcting keystone effect

Learn how to adjust the image to correct keystone effect.

Keystone effect occurs when you project an image onto the screen at an angle. As a result, the image appears distorted and resembles a trapezoid.

When making the adjustments, set the light source to minimum power.

<table>
<thead>
<tr>
<th>Horizontal keystone</th>
<th>Vertical keystone</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image1" alt="Horizontal keystone" /></td>
<td><img src="image2" alt="Vertical keystone" /></td>
</tr>
</tbody>
</table>

- Projector skewed horizontally to the screen
- Projector tilted vertically to the screen

1. If the image suffers from slight keystone effect, it can be corrected with electronic cropping.
2. If the keystone effect is severe, you can unevenly adjust the feet to compensate for projector tilt. It is recommended that you use lens offset to align the center of the image to the center of the screen before you correct the keystone effect.

3. If one side of the image is longer than another, adjust the tilt and level of the projector.

Displaying a test pattern

Display a test pattern to refine and adjust the projected image, or to diagnose and correct image issues.

1. In the right toolbar, tap Test Patterns.

2. Tap Full Screen.

3. Tap a test pattern. When a test pattern is active, a blue bar appears below the test pattern icon in the right pane.

4. To display a 2D test pattern in 3D mode, select the 3D Sync option. The 3D Sync option is selected automatically for 3D test patterns. 3D test patterns cannot be displayed in 2D mode.

5. To change the frame rate of the test pattern display, select from the available Frame Rate options:
   - For 2D test patterns, the available frame rates are 24, 30, 48, and 60 Frames Per Second (FPS). The default value is 24 FPS.
   - For 3D test patterns, the available frame rates are 48 and 60 FPS. The default value is 48 FPS.

Changing the frame rate of the display can assist with color measurement when working with corrected colors.

When you change the frame rate option, that option is applied to the next test pattern you select unless it is not available for that pattern. If a selected frame rate is not available, the default frame rate is applied for the test pattern display.

Adjusting the integrator rod and fold mirror

Extreme misalignment of projection optics can cause permanent damage to critical optical components. Only Christie qualified technicians can perform internal optical adjustments.

Notice. If not avoided, the following could result in property damage.
- Misalignment of the fold mirror may cause permanent damage to the product.

1. From the Test Pattern menu, select RGB-2K-Integrator Rod. The test pattern includes guided information for integrator focus and rotation adjustments.
2. Set the projector brightness level to approximately 50% to 60%.
3. Retrieve the 3 mm hex driver located inside the toolbox.
4. Remove the top cover of the projector.
5. Loosen the two integrator lock screws.

6. Loosen the lock screw located next to the Focus adjustment slider.

7. Unlock the fold mirror screws to unlock the adjustment knobs.
8. Using the V FOLD (purple) adjustment knob on the fold mirror, lower the image to expose the top of the active light area.

9. Using the Focus slider on the integrator, focus the top of the image at the center or slightly left of center.

10. Using the V FOLD and H FOLD adjustment knobs on the fold mirror, bring the image back up and fill the active light area.

11. Using the Rotate slider on the integrator, rotate the integrator to reduce shadows in the image.

12. Check the image quality.

13. As required to fill the image, make fine adjustments to the fold mirror, integrator rotation, and integrator focus.

14. When the correct image quality is achieved, tighten all screws to hold the adjustments:
15. Reinstall the top cover of the projector.

Aligning the boresight

The boresight adjustment balances the tilt of the lens mount to compensate for screen-to-projector tilt.

1. Display the boresight test pattern.
   a) In the right toolbar, tap **Test Patterns**.
   b) Select the **RGB-2K-Boresight** pattern and display it full screen.

2. Focus the image on cross-hair image **I**.

3. Evaluate the focus on cross-hair image **II** and **III**.
   - If all three images are in focus, no further action is required.
   - If boresight is required, continue to step 4.

The adjustment screws (A) on the lens mount affects the corresponding cross-hairs on the test pattern.
4. To loosen the three setscrews (B) on the lens mount, use a 5 mm hex driver. The setscrews must be backed out several turns to avoid contact with the inner lens mount plate.

5. To fine tune the focus of cross-hair pattern I, adjust the appropriate adjustment screw (A) until the cross-hair image is in focus with minimal flare.
6. To fine tune cross-hair pattern II, adjust the appropriate adjustment screw until the cross-hair image is in focus with minimal flare.

7. To fine tune cross-hair pattern III, adjust the appropriate adjustment screw until the cross-hair image is in focus with minimal flare.

8. Repeat step 5 to 7 as required until all three cross-hair patterns are in equal sharp focus.
   - If the boresight is acceptable, proceed with step 11.
   - If the boresight does not appear to be converging to an acceptable level of image quality, or if the lens does not focus over the correct range of throw distances, proceed with step 9.

9. To approximately recover the original factory boresight, position the three setscrews flush with the front face of the lens mount plate and in contact with the inner lens mount plate. This may require adjusting both setscrews and adjustment screws.
10. If further action is required, repeat steps 2 to 9.
11. Lock the setscrews, and re-check the boresight quality.
   Tighten the setscrews to 2.1 Nm (18 in-lb) to ensure they do not shift.

**Adjusting DMD convergence**

A convergence problem occurs when one or more projected colors (red, green, and blue) appears misaligned when examined with a convergence test pattern.

The three colors should overlap to form pure white lines throughout the image and one or more poorly converged individual colors may appear adjacent to some or all of the lines.

When adjusting the convergence, you are adjusting red and green to blue.

If you wear glasses with corrective lenses when performing this adjustment, ensure that you are viewing the test pattern on a straight angle through the optical axis of your glasses, and not from a tilted or angled perspective. This avoids a prismatic effect that can appear to shift convergence when viewing at an angle.

1. Before adjusting DMD convergence, ensure the projector has reached a steady operational state. If switching from a white or bright test pattern to a dark convergence test pattern, or if warming up the projector after a shutdown, allow 15 minutes for stabilization so that the optics can reach a steady state.
2. In the right toolbar, tap **Test Patterns**.
3. Select **RGB-2K-Convergence** and display it full screen.
4. Open the Service door on the side of the projector.
5. To adjust the convergence knobs, use the 3 mm driver included with the projector.
   If adjusting by hand without using the tool, pull out the convergence adjustment knobs to engage them.
6. Use the Convergence test pattern to assist with adjusting the horizontal and vertical lines. Horizontal adjustments are controlled by adjusting knob 3.

Vertical convergence and rotation are controlled by adjusting knobs 1 and 2. Christie recommends rotating a single knob a maximum of a quarter rotation before adjusting the second knob a quarter rotation. For example, if using one hand, turn the left knob a quarter rotation and then the right knob a quarter rotation, and so on. Adjusting a single knob for vertical or rotational adjustment to an extreme before adjusting the second knob may result in the convergence mechanism binding.

For the best stability, Christie recommends setting convergence while rotating the knobs in a clockwise direction. This may require first adjusting convergence by turning the knobs counterclockwise, and finalizing the convergence with a clockwise approach. This applies to all knobs.

7. When complete, push in all the convergence adjustment knobs to disengage them.

Correcting on-screen color

After installation, further image adjustments may be required to correct color on the screen.

The next steps may include creating a Measured Color Gamut Data (MCDG) file and configuring a Pureformity Color™ Technology (PCT) file to achieve optimal color and brightness uniformity.

For more information on managing color settings, see the CP2320-RGB User Guide (P/N: 020-102769-XX).
