GENERAL
Every effort has been made to ensure accuracy, however in some cases changes in the products or availability could occur which may not be reflected in this document. Christie reserves the right to make changes to specifications at any time without notice. Performance specifications are typical, but may vary depending on conditions beyond Christie's control such as maintenance of the product in proper working conditions. Performance specifications are based on information available at the time of printing. Christie makes no warranty of any kind with regard to this material, including, but not limited to, implied warranties of fitness for a particular purpose. Christie will not be liable for errors contained herein or for incidental or consequential damages in connection with the performance or use of this material. Manufacturing facilities in Canada and China are ISO 9001 certified.

Warranty
Products are warranted under Christie's standard limited warranty, the details of which are available at https://www.christiedigital.com/help-center/warranties/ or by contacting your Christie dealer or Christie.

PREVENTATIVE MAINTENANCE
Preventative maintenance is an important part of the continued and proper operation of your product. Failure to perform maintenance as required, and in accordance with the maintenance schedule specified by Christie, will void the warranty.

REGULATORY
The product has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the product is operated in a commercial environment. The product generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of the product in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at the user's own expense. Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

CAN ICES-3 (A) / NMB-3 (A)
이 기기는 업무용(A급)으로 전자파적합등록을 한 기기이오니 판매자 또는 사용자는 이점을 주의하시기 바라며, 가정외의 지역에서 사용하는 것을 목적으로 합니다.

ENVIRONMENTAL
The product is designed and manufactured with high-quality materials and components that can be recycled and reused. This symbol ⚠️ means that electrical and electronic equipment, at their end-of-life, should be disposed of separately from regular waste. Please dispose of the product appropriately and according to local regulations. In the European Union, there are separate collection systems for used electrical and electronic products. Please help us to conserve the environment we live in!

Introduction

This manual is intended for professionally trained operators of Christie high-brightness projection systems.

The illustrations in this document are for representation only and may not depict your projector model exactly.

Only Christie qualified technicians who are knowledgeable about the hazards associated with laser use, high-voltage, and the high temperatures generated by the projector lasers are authorized to assemble, install, and service the projector.

For complete D4K40-RGB product documentation and technical support, go to www.christiedigital.com.

Safety and warning guidelines

Read all safety and warning guidelines before installing or operating the projector.

This projector is intended for use in a non-cinema environment.

This projector must be operated in an environment that meets the operating range specification. Use only the attachments and/or accessories recommended by Christie. Use of others may result in the risk of fire, shock, or personal injury.

**Warning!** If not avoided, the following could result in death or serious injury.

- This product must be operated in an environment that meets the operating range as specified in this document.
- Do not look directly into the lens when the light source is on. The extremely high brightness can cause permanent eye damage.
- **EXTREME BRIGHTNESS!** When accessing a restricted access location for product service or maintenance, avoid exposure to the product beam path by turning the product power off and disconnecting the product from AC power, or by shuttering the light source to avoid emissions from the front aperture.
- **FIRE HAZARD!** Keep hands, clothes, and all combustible material away from the concentrated light beam of the projector.
- Keep fingers and other body parts away from the moving parts in the product. Tie back long hair, and remove jewelry and loose clothing before manually adjusting the product.
- **FIRE AND SHOCK HAZARD!** Use only the attachments, accessories, tools, and replacement parts specified by Christie.
- Do not operate the product without a lens installed.
- Always use a lens plug when installing or moving the product. This prevents contaminants from entering the product.
- **FIRE AND SHOCK HAZARD!** Use only the attachments, accessories, tools, and replacement parts specified by Christie.
Caution! If not avoided, the following could result in minor or moderate injury.

- TRIP OR FIRE HAZARD! Position all cables where they cannot contact hot surfaces, be pulled, be tripped over, or damaged by persons walking on or objects rolling over the cables.

**Installation safety and warning guidelines**

Read all safety and warning guidelines before installing the projector.

**Warning!** If not avoided, the following could result in death or serious injury.

- Possible hazardous optical radiation emitted from this product. (Risk group 3)
- High leakage current present when connected to IT power systems.
- Christie products must be installed and serviced by Christie qualified technicians.
- Do not operate the product without all of its covers in place.
- A minimum of four people or appropriately rated lift equipment is required to safely lift, install, or move the product.
- Always install safety straps when the frame and projector are installed overhead.
- Observe load ratings and applicable local safety codes.
- When installing the projector in portrait mode, the rigging device must have a sufficient load rating, as identified in this manual.
- This product must be installed within a restricted access location not accessible by the general public.
- Install the product so users and the audience cannot enter the restricted area at eye level.
- Only personnel who are trained on the precautions for the restricted access location can be granted entry to the area.
- Only Christie qualified technicians are permitted to open product enclosures.

**Caution!** If not avoided, the following could result in minor or moderate injury.

- ELECTRICAL and BURN HAZARD! Use caution when accessing internal components.
- Only Christie qualified technicians are authorized to use the tools provided in the toolbox.

**AC power precautions**

Read all safety and warning guidelines before connecting to AC power.

**Warning!** If not avoided, the following could result in death or serious injury.

- SHOCK HAZARD! Only use the AC power cord provided with the product or recommended by Christie.
- FIRE AND SHOCK HAZARD! Do not attempt operation unless the power cord, power socket, and power plug meet the appropriate local rating standards.
- SHOCK HAZARD! Do not attempt operation if the AC supply is not within the specified voltage and current, as specified on the license label.
- SHOCK HAZARD! The AC power cord must be inserted into an outlet with grounding.
- SHOCK HAZARD! Disconnect the product from AC before installing, moving, servicing, cleaning, removing components, or opening any enclosure.
- Install the product near an easily accessible AC receptacle.
Caution! If not avoided, the following could result in minor or moderate injury.

- FIRE HAZARD! Do not use a power cord, harness, or cable that appears damaged.
- FIRE OR SHOCK HAZARD! Do not overload power outlets and extension cords.
- SHOCK HAZARD! Power supply uses double pole/neutral fusing.

Laser safety precautions

Read all safety and warning guidelines before operating the projector laser.

Warning! If not avoided, the following could result in death or serious injury.

- LASER RADIATION HAZARD! This projector has a built-in Class 4 laser module. Never attempt to disassemble or modify the laser module.
- Possible hazardous optical radiation emitted from this product. (Risk group 3)
- Only Christie qualified technicians who are knowledgeable about the hazards associated with laser use, high-voltage, and high temperatures generated by the product are authorized to assemble, install, and service the Christie Laser Projection System.
- Do not look directly into the lens when the light source is on. The extremely high brightness can cause permanent eye damage.
- Do not operate the product without all of its covers in place.

Light intensity hazard distance

This projector has been classified as Risk Group 3 as per the IEC 62471-5:2015 standard due to possible hazardous optical and thermal radiation being emitted.

Warning! If not avoided, the following could result in serious injury.

- PERMANENT/TEMPORARY BLINDNESS HAZARD! Operators must control access to the beam within the hazard distance or install the product at the height that prevents exposure of spectators’ eyes within the hazard distance. The hazard zone must be no lower than 3.0 meters above the floor and the horizontal clearance to the hazard zone must be a minimum 2.5 meters.
- EXTREME BRIGHTNESS! Do not place reflective objects in the product light path.

The following show the zones for ocular and skin hazard distances.
• A—Hazard zone. The region of space where the projection light from the laser-illuminated projector is above emission limits for Risk Group 2. The light intensity may cause eye damage after a momentary or brief exposure (before a person can avert his or her eyes away from the light source). The light may cause skin burns to occur.

• B—Hazard distance. Operators must control access to the beam within the hazard distance or install the product preventing potential exposure of the spectators’ eyes from being in the hazard distance.

• C—No access zone. Horizontal clearance of the no access zone must be a minimum of 2.5 meters.

• D—Vertical distance to hazard zone. The hazard zone must be no lower than 3.0 meters above the floor.

• E—Represents the top view of the projector.

• F—Represents the side view of the projector.

The following table lists the hazard distance for the Christie projector lens with the zoom adjusted to its most hazardous position.

### For Installations in the United States

The following must be in place for laser-illuminated projector installations in the United States:

- Any human access to the hazard zone, if applicable, must be restricted by barriers to enforce the no access zone.
- Permanent show installations containing Risk Group 3 laser-illuminated projectors must meet the following conditions:
  - Installed by Christie or by Christie-authorized and trained installers. Refer to the Laser Illuminated Projector - Class 1 Risk Group 3 Installation training (Course code: CF-LIPI-01) on the [http://www.christieuniversity.com](http://www.christieuniversity.com) site.
  - Performed according to instructions provided by Christie.
  - Ensure the projection system is securely mounted or immobilized to prevent unintended movement or misalignment of the projections.
- A copy of the FDA variance approval letter must be with the operator or other responsible individual. FDA variances can be found in the online training course--Laser Illuminated Projection - Class 1 Risk Group 3 Installation.
- Temporary show installations containing Risk Group 3 laser-illuminated projectors may be installed by Christie or sold or leased only to valid laser light show variance holders (laser light show manufacturers) for image projection applications. Such manufacturers may currently hold a valid variance for production of Class IIIb and IV laser light shows and/or for incorporation of the Risk Group 3 laser-illuminated projectors into their shows. This requirement applies also to dealers and distributors of these laser-illuminated projectors.
- For temporary installations, the FDA variance holder must maintain complete records of all show itineraries with dates, locations, operator name, and contact information clearly and completely identified.
The Christie Laser Projection System Installation Checklist must be fully completed after the installation and sent to lasercompliance@christiedigital.com. A copy can remain on-site. This checklist can be found as a separate document in the accessory box with the manual.

- Certain US states have additional laser regulatory requirements. Contact lasercompliance@christiedigital.com for additional regulatory requirements.

Product labels

Learn about the labels that may be used on the product. Labels on your product may be yellow or black and white.

General hazards

Hazard warnings also apply to accessories once they are installed in a Christie product that is connected to power.

<table>

Warning! If not avoided, the following could result in death or serious injury.

- Electric shock hazard. To avoid personal injury, disconnect all power sources before performing maintenance or service.
- Electrocutioon hazard. To avoid personal injury, always disconnect all power sources before performing maintenance or service procedures.
- Optical radiation hazard. To avoid personal injury, never look directly at the light source.
- Voltage hazard. To avoid personal injury, always disconnect all power sources before performing maintenance or service procedures.
Caution! If not avoided, the following could result in minor or moderate injury.

- Hot surface hazard. To avoid personal injury, allow the product to cool for the recommended cool down time before touching or handling for maintenance or service.

- Burn hazard. To avoid personal injury, allow the product to cool for the recommended cool down time before handling for maintenance or service.

- Moving parts hazard. To avoid personal injury, keep hands clear and loose clothing tied back.

- Moving fan blade. To avoid personal injury, keep hands clear and loose clothing tied back. Always disconnect all power sources before performing maintenance or service procedures.

Notice. If not avoided, the following could result in property damage.

- General hazard.

Mandatory action

- Disconnect all power sources before performing maintenance or service procedures.

- Consult the service manual.

Electrical labels

- Indicates the presence of a protective earth ground.

Laser labels

- CLASS 1 LASER PRODUCT IEC 60825-1

- FDA laser variance (US projectors only)

This product conforms with performance standards for laser products under 21 CFR Part 1040 except with respect to those...
characteristics authorized by Variance Number 2018-V-3898 effective on November 21, 2018.

Indicates a light hazard. Do not look directly into the lens. The extreme high brightness can cause permanent eye damage. Class 1 Laser Product - Risk Group 3 according to IEC 60825-1: 2014 and IEC 62471-5:2015

Indicates Class 4 laser radiation when open. Avoid eye or skin exposure to direct or scattered radiation.

Additional safety hazards

Do not look directly into the lens. The extremely high brightness can cause permanent eye damage.

Indicates high leakage current. Earth connection essential before connecting the power supply.

Projector overview

Learn about the D4K40-RGB projector.

D4K40-RGB is a professional quality, easy-to-use 3DLP® RGB laser projector. The high-brightness D4K40-RGB is designed to meet the special demands found in large venues, live events, and high-usage environments. With reliable Christie RealLaser™ illumination integrated in a rugged chassis and ultra-fast processing of Christie TruLife+™ electronics, the D4K40-RGB is the go-to solution for demanding, large venue events and applications.

Contact your dealer

Record the information about your projector and keep this information with your records to assist with the servicing of your projector. If you encounter a problem with your Christie projector, contact your dealer.

Dealer:
Key features

Understand the important features of the projector.

- Long lasting, reliable Christie RealLaser™ RGB laser illumination
- Compact form with direct-coupled laser source integrated into the projector chassis
- LiteLOC™ color lock feature for constant image brightness and color
- Omnidirectional operation for unrestricted design and installation flexibility
- Christie TruLife™ electronics for ultra-high resolution, high frame rate video up to 120 frames per second
- Christie Terra input card integrates into SDVoE networks
- Compatible with most Christie Boxer lenses
- Full-color LCD display to provide information at-a-glance
- Integrated keypad control interface

Installation and setup

Learn how to install, connect, and optimize the projector display.

Site requirements

To safely install and operate the D4K40-RGB projectors, the installation location must meet these minimum requirements.

Physical operating environment

- Ambient temperature (operating) 5°C to 40°C (41°F to 104°F)
- Humidity (non-condensing) 10% to 80%
- Operating altitude 0 to 3000 meters (0 to 9843 feet)

External exhaust ducting

Sufficient ventilation is required around the projector to regulate the temperature of the internal laser module. If necessary, air intake and exhaust HVAC ducts can be installed.
An exhaust duct is also available for purchase as an optional accessory (P/N: 163-102104-XX). Instructions for installing the exhaust duct are included with the accessory part.
The installation site must provide an airflow 450 cubic feet per minute (CFM) at 1 to 1000 meters elevation, and must accommodate a heat load of 4 kW.

For each additional 1000 meters above sea level, increase the airflow (CFM) value by 15%. If an extraction duct is not used, the operating temperature range is restricted to 5°C to 25°C at a maximum altitude of 3000 meters.

Power connection

Connect to AC power using the power cord provided with the projector.
A certified wall breaker is required as part of the installation. The breaker must be part of the building and easily accessible. The size of the breaker is determined from the power requirements of the projector and can be up to 30A maximum.

**Required tools**

Make sure the following tools are available during the installation.

- 12 in. screwdrivers: Phillips #2 (magnetic) and flat
- 2.5mm, 3mm, and 5mm hex drivers
• Adjustable wrench
• Step stool
• Powder-free N-DEX gloves
• Clean dry air (CDA)
• Isopropyl alcohol
• Cotton swabs

Preparing the installation site

Ensure the installation area is ready for the components.

1. Clear the installation area.
2. Post laser hazard warning signs at all entry doors.
3. Place each component near its installation location.

Adjusting the rigging handles

comes with the rigging handles installed in the landscape position. The handles can be moved to support other orientations.

1. Ensure the projector is in a secure position.
2. Remove the two screws securing the each handle.
3. If required, flip the projector to the orientation you want it in.
4. Line the two handles over the mounting holes.
5. Install the screws and tighten to a torque of 120 to 150 in-lb.

The following shows the rigging handles installed when the projector is positioned in portrait orientation.
6. To assist with stability and prevent sway, Christie recommends installing two 2-inch ProBurger clamps on each handle. Orient the clamps on either side of the projector’s center of gravity.

Lifting and positioning the projector

Safely lift and position the projector in the location where it will be used.

**Warning!** If not avoided, the following could result in death or serious injury.

- A minimum of four people or appropriately rated lift equipment is required to safely lift, install, or move the product.
- Do not install or operate the projector in any position that does not meet the stated product specifications for alignment and orientation.

1. Position each person at the corners of the projector.
2. Lift up the projector and move it to the location where it will be used.
3. Position the projector so it is centered and parallel with the theater screen. If space is limited, aim the projector slightly off-center and use lens offset to center the image on the screen.

Leveling the projector

Use the projector feet to level the projector.

1. To adjust the vertical position of the projector, extend or retract the adjustable feet on the bottom of the projector using the adjustable knobs on the feet.
The projector feet are removable and can be moved to the top of the projector to run in an inverted orientation.

2. Once the required adjustment is made, using a wrench, tighten the lock nut against the bottom of the projector.

**Installing the projector lens**

Only use lenses designed for D4K40-RGB projectors. Installing a lens not designed for D4K40-RGB, results in a warning that the lens is not present.

1. Remove the lens caps from the lens.
   The packaging tape is required to ensure safe shipment of the projection lens to restrain the zoom ring from rotating during shipping.

2. Align the guides on the front cover and the lens marked by a red line.
3. Insert the lens into the projector and turn it clockwise until you hear two clicks.
   The first click indicates the safety lock mechanism has been engaged.

4. Continue to turn the lens clockwise until you hear a second click.
   The second click indicates the lens is fully locked in position. The top center label should face up and be aligned to the lens guide on the front cover.
Calibrating the lens motor

Ensure the lens motor is calibrated before using the projector.

If the lens motors are not calibrated properly, implications may include:

- Incorrect reporting of the lens motor position.
- Inability to use the full range of the lens motors.
- Lens motors traveling outside of the pre-defined keep-out area.
- Damage to the projector.

Calibrate the lens motors when any of the following conditions are met:

- After a lens change.
- After the projector is moved and/or jostled.
- After any manual adjustment is made to the zoom or focus.

To calibrate the lens:

1. Select **MENU > Configuration > Lens Settings > Lens Calibration.**
2. Select **Enter.**
Removing the projection lens

Use the correct method of removing the lens.

1. Push in and hold the lens release button.

2. Turn the lens counterclockwise until the lens guides are aligned.

3. Slide the lens straight out of the projector.
   If the lens does not slide out easily, reset the lens offset before removing the lens.

4. Attach the lens cap to avoid damage.

   **Warning!** If not avoided, the following could result in death or serious injury.
   - Once the lens removal has begun the safety retention features of the lens are defeated. To re-engage the safety lock mechanism, the lens must be removed and re-inserted, or fully rotated clockwise until a click is heard.
   - Packaging tape is required to ensure safe shipment of the projection lens to restrain the zoom ring from rotating during shipping.

Installing the ultra short throw projector lens

Learn how to install the ultra short throw projection lens.

The illustrations in this document are for representation only and may not depict your projector model exactly.

1. Switch to the ultra short throw lens keep-out area.
   a) Select **MENU > Configuration > Lens Settings**.
   b) Select **Enable UST Lens (0.38:1)**.
   c) To enable the ultra short throw lens keep-out area, select **Enter**.
   Not switching to this keep-out area risks damaging the projector when the ultra short throw lens is installed.

2. Remove the lens caps from the lens.
3. Align both the guide on the front cover and the lens marked by a red line, and the insert plates on the lens.

4. Insert the lens into the projector and turn it clockwise until it is locked in place. Make sure the lens is supported near the front element.

Aligning and focusing the image (ultra short throw lens)

After installing the lens, align and focus the image.

The method for performing the steps below may vary depending on projector model. For detailed information, refer to the user documentation for your product.

1. If required, power on the projector.
2. Perform a lens calibration.
3. To align the image, position the projector and adjust offsets.
4. Adjust boresight.
5. Adjust the center focus of the image by using the Focus feature on the projector.
6. Manually adjust the corner focus of the image using the focus ring on the lens.
7. To fine tune the focus, repeat steps 5 and 6 until optimum focus is achieved.

**Connecting to AC power**

Connect AC power to the projector.

1. Plug the AC power cord into the projector.
2. Secure the AC power cord with the power cord retainer.

**Turning on the projector**

When the projector AC power supply is plugged in and the breaker switch is on, the power is on.

**Warning!** If not avoided, the following could result in death or serious injury.

- SHOCK HAZARD! Do not attempt operation if the AC supply is not within the specified voltage and current, as specified on the license label.

1. Plug the projector into AC power and turn on the breaker switch.
   - When plugged in and the breaker switch is on, the projector automatically powers on to standby mode within 60 seconds. The display panel functionality becomes available.
2. To turn the light source on using the projector keypad, press and hold the **Power** button until you hear a beep.
   - To turn on the light source using the remote, press and hold the **ON** button until you hear a beep.
Projector LED status indicators

Identify the LED state colors and meaning.

<table>
<thead>

Projector LED shutter indicators

Identify the shutter LED state colors and meaning.

<table>
<thead>
<tr>
<th>LED</th>
<th>State</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Solid magenta</td>
<td>Shutter closed</td>
<td>The shutter is closed. In standby, the shutter is always automatically closed and the magenta light is muted.</td>
</tr>
<tr>
<td>Off</td>
<td>Shutter open</td>
<td>The shutter is open.</td>
</tr>
</tbody>
</table>
Turning off the projector

When powering off in preparation for inspection or maintenance, always disconnect from AC.

1. To turn the light source off using the projector keypad, press and hold the ♯ button until you hear a beep.
   To turn off the light source using the remote, press and hold the OFF button until you hear a beep.
   When powering off the projector, allow the projector to complete its cool down cycle. Do not immediately unplug the projector if this can be avoided.

2. To turn off power to the projector, disconnect from AC power.

3. To turn off power to the projector, turn off the projector breaker switch and disconnect from AC power.

Aligning the image

Only perform image alignment after the projector is fully assembled and powered up in its final location.

Basic image alignment ensures the image reflected from the DMDs is parallel and well-centered with the lens and screen. This initial optical alignment is the foundation for optimizing images on the screen and must be completed before final boresight adjustments. Before beginning, make sure the projector is properly positioned in relation to the screen.

1. Ensure the projector is positioned in the throw distance range for the particular lens.
2. Display a test pattern.
3. Do a quick preliminary focus and (if available) zoom adjustment with the primary lens.
   Do not worry about consistency across the image at this point, just center focus. It is good practice to have zoom adjustment color and focus adjustment color in the center of its range.
4. Holding a piece of paper at the lens surface, adjust offsets as necessary until the image is centered within the lens perimeter. A full black field works best for this.
5. If the projector is mounted off center to the screen axis, offset the lens as much as required.
   Aim the projector over slightly towards the center of the screen, but use caution when doing so, as too much tilt will cause excessive keystone distortion.
6. With a framing pattern on screen, double-check projector leveling so the top edge of the image is parallel to the top edge of the screen.

Adjusting offset

Adjust the offset to align the image on the screen. Always adjust offset before adjusting boresight.

For the best optical performance and minimal keystone, use offsets instead of aiming at the center of the image, in off-axis installations. Avoid extreme tilts or offsets. Corner vignettes on a white test pattern indicate extreme offset that should be avoided using mechanical alignment.

1. Project an image with the primary lens.
2. Select a framing test pattern.
3. Select LENS OFFSET.
   You can also select MENU > Configuration > Lens Settings > Lens Offset.
4. Use the arrows to adjust the offset to display a square image on the screen, with minimal projector aiming error.
5. To exit to the home page, select Back.

**Resetting the lens to home position**

Realign the lens to the home position after the lens has been offset and out of alignment.

1. Select LENS OFFSET.
   - You can also select MENU > Configuration > Lens Settings > Lens Offset.
2. To reset the lens to the default home position, select Enter.
3. To confirm the reset, select OK.

**Selecting a test pattern**

Many test patterns are available to assist with the configuration of the projector and to diagnose any issues that may occur.

1. From the display panel, use the arrows to select Test Pattern.
   - You can also select the test patterns from MENU > Test Pattern or pressing N on the IR remote.
2. Scroll through the list of test patterns.
3. Select the required test pattern.
4. To confirm your selection, select Enter.

**Adjusting boresight**

The boresight adjustment balances the tilt of the lens mount to compensate for screen-to-projector tilt.

**Caution!** If not avoided, the following could result in minor or moderate injury.

- Do not look directly into the lens when the light source is on. The extremely high brightness can cause permanent eye damage.

1. Close the shutter on the projector.
2. Unlock the three lens mount stabilization screws.
3. Open the shutter.

4. From the Test Pattern menu, select the **Boresight** test pattern.
   The Boresight test pattern assists with adjusting the boresight for the three focus points.

5. To focus the bottom boresight guide, adjust the blue boresight screw.
   Adjust the screw 1/4 inch. If you get to the end, further unlock the corresponding stabilization screw.
6. To focus the right boresight guide, adjust the green boresight screw.
7. To focus the left boresight guide, adjust the yellow boresight screw.
8. To continue to refine the focus, repeat steps 5 to 7.
9. Before adjusting the stabilization screws, close the shutter.
10. To maintain the adjustments, lock the stabilization screws.
   When locking the screws, start with the top stabilization screw and turn it so it just touches the base. Repeat for the other two stabilization screws. Continue to adjust the locking screws until they are tight.
11. Open the shutter.

**Optimizing the integrator zoom and focus**

1. From the Test Pattern menu, select the Integrator Rod test pattern.

2. Open the Service door on the side of the projector.
3. Unlock the Zoom and Focus paddles.
4. Adjust the magnification using the Zoom paddle.
Make sure you do not see any corners.

5. Adjust the focus using the Focus paddle.
Always focus the center of the image first and then make sure no blurry edges exist.
6. To continue to refine the zoom and focus, repeat steps 4 and 5.
7. When complete, lock the Zoom and Focus paddles.

**Adjusting the fold mirror**

Fold mirror adjustment must be completed by trained personnel.

**Notice.** If not avoided, the following could result in property damage.
- Misalignment of the fold mirror may cause permanent damage to the product.

1. Set the projector to minimum power.
2. From the Test Pattern menu, select the **Integrator Rod** test pattern.
3. Open the Service door on the side of the projector.
4. Unlock the fold mirror screws to unlock the adjustment knobs.
5. To make horizontal adjustments, use the orange knob labeled Horizontal.
6. To make vertical adjustments, use the purple knob labeled Vertical.

7. To continue to refine the fold mirror adjustment, repeat the horizontal and vertical adjustments.
8. Lock the fold mirror screw to lock the adjustment knobs.
9. Once satisfied with the alignment, increase the projector power.

**Adjusting DMD convergence**

A convergence problem can be identified when one or more projected colors (red, green, and blue) appears misaligned when examined with a convergence test pattern.

The three colors should overlap to form pure white lines throughout the image and one or more poorly converged individual colors may appear adjacent to some or all of the lines.

When adjusting the convergence, you are adjusting red and green to blue.

> If you wear glasses with corrective lenses when performing this adjustment, ensure you are viewing the test pattern on a straight angle through the optical axis of your glasses and not from a tilted or angled perspective. This avoids a prismatic effect that can appear to shift convergence when viewing at an angle.
1. Before adjusting DMD convergence, ensure the projector has reached a steady operational state. If switching from a white or bright test pattern to a dark convergence test pattern, or if warming up the projector after a shutdown, allow 15 minutes for stabilization so the optics can reach a steady state.

2. From the Test Pattern menu, select the **RGB-4K-Convergence** test pattern and display it full screen.

3. Open the Service door on the side of the projector.

4. To adjust the convergence knobs, use the 3 mm driver included with the projector.
   - If adjusting by hand without using the tool, pull out the convergence adjustment knobs to engage them.
5. Use the Convergence test pattern to assist with adjusting the horizontal and vertical lines. Horizontal adjustments are controlled by adjusting knob 3. Vertical convergence and rotation are controlled by adjusting knobs 1 and 2. Christie recommends rotating a single knob a maximum of a quarter rotation before adjusting the second knob a quarter rotation. For example, if using one hand, turn the left knob a quarter rotation and then the right knob a quarter rotation, and so on. Adjusting a single knob for vertical or rotational adjustment to an extreme before adjusting the second knob may result in the convergence mechanism binding.

For the best stability, Christie recommends setting convergence while rotating the knobs in a clockwise direction. This may require first adjusting convergence by turning the knobs counterclockwise and finalizing the convergence with a clockwise approach. This applies to all knobs.

6. When complete, push in all the convergence adjustment knobs to disengage them.

**Aligning the image with lens zoom and focus**

The lens zoom and focus adjustment allows the projected image to be focused and shifted to align with the screen.

1. Display an image or test pattern that can be used to analyze image focus and geometry.
2. Select **ZOOM**.
3. Use the up and down arrows to zoom in or out of the image.
4. To exit, select **Back**.
5. Select **FOCUS**.
6. Use the up and down arrows to adjust the focus of the image.
7. To exit, select Back.
8. To refine your adjusts, repeat steps 2 to 7.

Running Auto Setup to optimize display settings

Auto Setup initiates an automated process in which the projector optimizes video settings for the active signal. Auto Setup helps to save time in perfecting a display and you can modify the adjustments as required.

1. Make sure of the following before running Auto Setup:
   - Test patterns are turned off (on page 31).
   - The active signal is valid.
2. From the remote, select Auto Signal or from the web UI, select Auto Setup.
3. Select Run Auto Setup.
   The system optimizes the active signal and displays a progress message on screen.

Configuring D4K40-RGB to work with Christie Link

Configure D4K40-RGB to work with Christie Link, which provides a fully integrated fiber solution for long range video transport.

1. Turn on D4K40-RGB.
2. Verify the HBMIC has been installed in slot 0.
3. To enable the Christie Link option, select MENU > Configuration > Input Settings > Enable Christie Link (Slot 0).
   This option is disabled if an HBMIC is not installed.
4. Select Enter.
5. Select the QSFP+ option as the input setting.
   a) From the side panel home page, select Input.
   b) On the Input selection page, select the appropriate input marked Christie Link.
   More than one input source may be listed as Christie Link, depending on how many signals are being sent from Christie Link.

Completing the installation checklist

Complete the provided installation checklist (P/N: 020-103137-XX) and return it to Christie.
Connecting devices and establishing communication

Learn how to connect external devices to the projector.
Communication and input ports are located on the projector side input panel (operator side). The image below shows an example of the video option card slot numbers and the IMXB panel; your panel may look different.

Video sources can be connected to either the ports on the video option cards or the HDBaseT port on the IMXB.

IMXB ports
The IMXB has a variety of ports that can be used for control, 3D sync, upgrading, retrieving interrogators, and connecting audio.
### Port Description

<table>
<thead>
<tr>
<th>Port</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Audio Out</td>
<td>Not supported.</td>
</tr>
<tr>
<td>HDBaseT</td>
<td>Accepts video signals, Ethernet, and IR.</td>

<tr>
<td>USB 1/USB 2</td>
<td>Connects a USB flash drive that has been formatted with a FAT32 file system. Can be used for upgrades, backups, restores, and interrogators.</td>
</tr>
<tr>
<td>USB 3</td>
<td>For manufacturing use only.</td>
</tr>
<tr>
<td>Wired Keypad</td>
<td>Physically connects a remote control to the projector.</td>
</tr>
<tr>
<td>3D Sync In/3D Sync Out</td>
<td>Supported for 3D-enabled projectors.</td>
</tr>
<tr>
<td>Ethernet</td>
<td>Connects to the web user interface and can send Christie serial commands.</td>
</tr>
<tr>
<td>RS232</td>
<td>Sends Christie serial commands using a standard RS232 serial cable.</td>
</tr>
<tr>
<td>GPIO</td>
<td>Provides a method for controlling the projector using electrical signals.</td>
</tr>
</tbody>
</table>

### Connecting a video source using 3G input card

The 3G input card (3GIC) accepts digital video data from HD and 3G-SDI (Serial Digital Interface) sources.

Part number: 108-313101-02+

The input configurations listed below are supported.

<table>
<thead>
<tr>
<th>Input configuration</th>
<th>Description</th>
<th>Requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>Four-Port</td>
<td>Enables connection of four SDI cables to two 3GIC cards. Each SDI input supplies one quadrant or column of a 4K input image. This configuration supports high resolution and high frame rate input video streams.</td>
<td>Two 3GIC cards</td>
</tr>
<tr>
<td>One-Port</td>
<td>Enables connection of one SDI cable to the 1-IN input of a 3GIC card (in any slot). In this configuration the SDI input supplies the entire video raster.</td>
<td>One 3GIC card</td>
</tr>
</tbody>
</table>

**Dual 3G/HD/SD SDI Input**

This card may or may not be included with your model. Standard inputs are subject to change. Refer to the *D4K40-RGB Specifications Guide (P/N: 020-102959-XX)* for more details.

**Related information**

Connecting a video source using DVI

The Dual Link DVI input card (DDIC) accepts digital video source from DVI sources. It does not support incoming analog signals.

Part number: 108-312101-XX

The input configurations listed below are supported.

<table>
<thead>
<tr>
<th>Input configuration</th>
<th>Description</th>
<th>Requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>Four-Port</td>
<td>Enables connection of four DVI cables to four DDIC cards. Each DVI input supplies one quadrant or column of a 4K input image. This configuration supports high resolution and high frame rate input video streams.</td>
<td>Four DDIC cards</td>
</tr>
<tr>
<td>Two Port</td>
<td>Enables connection of two DVI cables to two DDIC cards. Each DVI input supplies one of two columns of a 4K image.</td>
<td>Two DDIC cards</td>
</tr>
<tr>
<td>One-Port</td>
<td>Enables connection of one DVI cable to the DVI input of a DDIC card (in any slot). In this configuration, the DVI input supplies the entire video raster.</td>
<td>One DDIC card</td>
</tr>
</tbody>
</table>

This card may or may not be included with your model. Standard inputs are subject to change. Refer to the *D4K40-RGB Specifications Guide (P/N: 020-102959-XX)* for more details.

**Related information**
*HBMIC video formats (on page 48)*

## Connecting a video source using TSIC

The Terra SDVoE (TSIC) input card accepts digital video data from a Christie Terra Transmitter.

Part number: 144-132107-XX
The input configuration listed below is supported.

<table>
<thead>
<tr>
<th>Input configuration</th>
<th>Description</th>
<th>Requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>One-Port</td>
<td>Enables a connection from an SDVOE source (such as the Christie Terra Transmitter) and routes it to the backplane interface. Refer to the signal chart for more information about what resolution, frame rates, and formats are supported based on the projector the card is installed in.</td>
<td>1 TSIC card</td>
</tr>
</tbody>
</table>
Connecting a video source using HDBaseT

The HDBaseT port on the IMXB accepts digital video data from HDBaseT sources.

The input configurations listed below are supported.

<table>
<thead>
<tr>
<th>Input configuration</th>
<th>Description</th>
<th>Requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>One-Port</td>
<td>Enables connection of one Ethernet cable to the HDBaseT port on the IMXB. The HDBaseT input supplies the entire video raster.</td>
<td>N/A</td>
</tr>
</tbody>
</table>

Selecting a video source

After connecting a video source to the projector and making sure your port configuration is correct, you must select it.

1. From the display panel, select **INPUT**.
2. Navigate the list of input selections until you find a selection that best matches your configuration.
   
   The range of available input selections depends on the projector model and/or input/output combinations. When the Default configuration is selected, the following inputs are supported for each configuration:
   
   - One-port—HDMI, SDI, DisplayPort, Christie Link, HDBaseT
   - Two-port—DisplayPort, Christie Link
   - Four-port quadrants—SDI
   - One-port dual-input 3D (3D license-specific)—SDI, DisplayPort, Christie Link

   When SDVoE is selected, the HDMI, SDVoE, Christie Link, and HDBaseT inputs are supported for the one-port configuration.
3. To select the input, select **Enter**.

## Connecting to a computer or server

Communicate with a remote computer, server, or an existing network using a RJ-45 cable.

The RS232 port located on the IMXB faceplate uses Christie-proprietary protocol and is intended for Christie accessories or automation controllers only.

For more information, on the serial commands, see the *D4K40-RGB Serial Commands Guide (P/N: 020-102972-XX)*.

1. Use an RJ-45 cable to connect the Ethernet hub or switch to the Ethernet port, located on the projector IMXB faceplate.
2. When using the Christie serial protocol over Ethernet, connect to port 3002.
3. For applications or equipment using serial communications, use the Christie-proprietary serial protocol to communicate with the RS232 port on the IMXB faceplate.

## Configuring the RS232 port

Configure the RS232 port to send Christie serial commands using a standard RS232 serial cable.

For more information, on the serial commands, see the *D4K40-RGB Serial Commands Guide (P/N: 020-102972-XX)*.

1. Select **Menu > Communications > Projector Communication**.
2. Use the down arrow to select **Baud Rate**.
3. Select the appropriate baud rate and select **Enter**.
4. Use the down arrow to select **Network Routing**.
5. Select the type network routing appropriate for your projector and select **Enter**.

## Setting up the Ethernet

Ethernet is setup to obtain an IP address automatically if a DHCP server is on the network, modify IP settings, or manually enter an address.

Christie recommends using the Ethernet port on the IMXB as the HDBaseT port is limited to 100 Mb/s.

You cannot change the IP settings using the web interface.

1. From the display panel, use the arrow keys to select **IP Settings**.
2. To set the type of network, select **DHCP** or **Static**.
3. If you selected Static, manually enter the network information for the **IP Address**, **Subnet**, and **Gateway**.
4. Select **Apply** and select **Enter**.
5. Select **MENU > Communications > Network Settings**.
6. Select **Device name**.
7. Use the up and down keys to enter the name of the projector.
8. Select **Enter**.
Signal connectivity specifications

Identify the signal connectivity specifications for D4K40-RGB.

The list of formats listed below are not exhaustive and other formats may be supported. For more information, contact Christie Technical Support.

For a list of supported Christie Link video formats, see the Christie Link User Manual (P/N: 020-102234-XX).

HBMIC video formats

Identify the video formats for the HBMIC card.

**DisplayPort 1.2**

This interface supports HDCP 1.x.

Regulatory

This product conforms to the latest regulations and standards related to product safety, environmental, and electromagnetic compatibility (EMC) requirements.

Safety

- IEC/EN 62471-5 – Photobiological safety of lamps and lamp systems – Part 5: Image projectors

Electro-magnetic compatibility

Emissions

- CAN ICES-003 (A)/NMB-003 (A) – Information Technology Equipment (Including Digital Apparatus) – Limits and Methods of Measurement
- FCC CFR47, Part 15, Subpart B, Class A – Unintentional Radiators
- IEC 61000-3-11/EN61000-3-11: Limitations of Voltage Changes, Voltage Fluctuations, and Flicker for equipment with rated current ≤ 75 A
- IEC 61000-3-12/EN61000-3-12: Limits for harmonic current emissions for equipment for systems with input current > 16 A and ≤ 75 A per phase

Immunity

Environmental

- China Ministry of Information Industry (along with 7 other Government Agencies) Order No.32 (01/2016) on the control of pollution caused by electronic information products, hazardous
substances concentration limits (GB/T 26572 - 2011), and the applicable product marking requirement (SJ/T 11364 - 2014).

- EU Directive (2011/65/EU) on the restriction of the uses of certain hazardous substances (RoHS) in electrical and electronic equipment and the applicable official amendment(s).
- EU Directive (2012/19/EU) on waste and electrical and electronic equipment (WEEE) and the applicable official amendment(s).
- Regulation (EC) No. 1907/2006 on the registration, evaluation, authorization and restriction of chemicals (REACH) and the applicable official amendment(s).
