## Christie M 4K25 RGB version 1.0.1

This document provides the notes and known issues for the initial release of the Christie M 4K25 RGB product suite.

### Affected products

The following products are affected:

- Christie M 4K25 RGB

### Purpose of release

The primary purpose of this release is to introduce the following features:

- Provided fixes and improvements over version 1.0.0.

### Notes

Note the following about version 1.0.1:

- When operating in UHD/4K mode, the Christie M 4K25 RGB projector uses an actuator to enhance the resolution of the image. Occasionally, when input sources are switched, a buzzing noise may be heard for a few seconds while the actuator locks onto the frame-rate of the signal. This noise is normal and does not indicate an error or problem with the projector.

### Known issues

This release of Christie M 4K25 RGB contains the following known issues:

- Christie Link signals delivered over DisplayPort 2 do not display when 3D Mode is set to Multiflash.  
*Workaround:* Setting 3D Mode to Off corrects this issue.
- When using the Christie View feature, a horizontal tear in the displayed image is observed.  
*Workaround:* To correct this issue, slightly increase the frame delay through the **MENU > Image Settings > Advanced Image Settings > Frame Delay > Set Delay** option.
