
Software Release Notes

Griffyn Series version 1.2.0

This document provides the changes from Griffyn Series version 1.1.1 to Griffyn Series 1.2.0.

Affected products

The following products are affected.

- Griffyn Series

Purpose of release

The primary purpose of this release is to provide the following new features and updates:

- Introduces the Griffyn 4K45-RGB and Mirage 4K45-RGB models.
- Improved the laser illumination soft start. Timing to execute the soft start has been lowered to just over one second to minimize transition time as much as possible while meeting the safety requirement
- Fixed an issue where SDI signals that were missing a payload ID were not displayed and no warning was presented. In this release if the payload ID is missing the software automatically detects the format where possible. If auto detection is not possible, a warning is displayed indicating the payload ID is missing.

Known issues

This release of Griffyn Series contains the following known issues:

- Frame tearing may be present when using Christie View (MPOV).
Workaround: Increase the Frame Delay setting to correct the problem.
- LiteLOC™ performance is compromised when running at low brightness levels (30 to 50%). Christie does not recommend brightness levels at 30% or lower as laser devices may shut down and colors may drop out.
Workaround: Raise brightness.
