
Software Release Notes

Christie M RGB Series version 1.2.0

This document provides the changes from Christie M RGB Series version 1.1.1 to Christie M RGB Series 1.2.0.

Affected products

The following products are affected:

- Christie M 4K25 RGB
- Christie M 4K+25 RGB

Purpose of release

The primary purpose of this release is to introduce the following features and updates:

- Added support for VOM-HBI.
The card will be released in the near future.
- Added support for the CS12GO board update.
- Added Camera Friendly Color mode.
For more details, see the *TruLife+ User Guide (P/N: 020-103315-XX)*.
- Updated the web interface so a password is required to enter the Service menu.
- Added the 3D Darktime Status item to the Status System.
For more details, see the *TruLife+ Status System Guide (P/N: 020-103327-XX)*.
- Updated LiteLOC™ behavior so the Standard Fan Speed Profile is automatically selected when LiteLOC is disabled.
- Improved SDVoE signal handling.

Notes

Note the following about version 1.2.0:

- When operating in UHD/4K mode, the Christie M RGB Series projector uses an actuator to enhance the resolution of the image. Occasionally, when input sources are switched, a buzzing noise may be heard for a few seconds while the actuator locks onto the frame-rate of the signal. This noise is normal and does not indicate an error or problem with the projector.

Known issues

This release of Christie M RGB Series contains the following known issues:

- Christie Link signals delivered over DisplayPort 2 do not display when 3D Mode is set to Multiflash.

Workaround: Setting 3D Mode to Off corrects this issue.

- When using the Christie View feature, a horizontal tear in the displayed image is observed.
Workaround: To correct this issue, slightly increase the frame delay through the **MENU > Image Settings > Advanced Image Settings > Frame Delay > Set Delay** option.
