
Software Release Notes

Korus Series version 1.1.0

This document describes the changes from Korus Series version 1.0.0 to version 1.1.0.

Affected products

The following products are affected:

- 4K1400-KS
- 4K1400A-KS
- 4K1000-KS
- 4K1000A-KS

Purpose of release

The primary purpose of this software release is the following:

- Added support for the 1.25-2.0 zoom lens (P/N: 140-165103-XX).
- Corrected behavior for the Z-type ultra-short throw (UST) 0.34-0.37 lens (P/N: 140-164102-XX).
- Fixed the following issues:
 - When attempting to add a projector to Mystique while it is warming up, the projector resolution reported to Mystique showed 4x4 instead of 3840x2400.
 - In the web interface after executing an auto focus, the lens calibration was disabled and it only highlighted after refreshing the page.
 - When the test pattern was enabled in the web interface, using the left and right buttons on the remote control to switch between options, only switching to the color bars worked.
 - During long-term input switching (**HDMI1** > **HDMI2** > **DisplayPort** > **HDBaseT**), a `Filter wheel stop` error occasionally occurred.
 - When frequently switching between HDMI1 (4K@24Hz HDR) and HDBaseT (1080p@60Hz 3D), half of the screen occasionally showed noise or abnormal color.
 - When Low Latency mode was set to **Ultra** and a 1080p@240Hz video signal was input, the projected image occasionally exhibited frame tearing.

Known issues

The following are known issues in this release.

- In the web interface, the **Focus** button does not function properly after switching to Back Focus when installed with Z-type ultra-short throw (UST) lens.

Resolution: This issue will be addressed in the version 1.2.0 software release.
