
Software Release Notes

4K40-RGB version 1.3.5

This document provides the changes from 4K40-RGB version 1.3.4 to 4K40-RGB version 1.3.5.

Affected products

The following products are affected:

- D4K40-RGB
- Mirage 4K40-RGB

Purpose of release

This release updates the HDMI 2.0 support provided by the HBMIC option card, which provides improved interoperability with HDMI sources.

Notes

Note the following about version 1.3.5:

- Upgrading a projector from a USB requires the software package be located in the root folder of the USB flash drive and the drive be formatted using a FAT based file system.
- After the upgrade is complete, if you see an issue with the thumbnail display on the web user interface, clear the web browser cache.
- Upgrading from 4K40-RGB v1.2.1 or older to a newer version invalidates the existing `service` web user interface login; instead, use `user` as the username and `user` as the password. To change the default password, use **MENU > Admin > Remote Password feature**.

Known issues

This release of 4K40-RGB contains the following known issues:

- **MENU > Configuration > Light & Output Settings > Laser Power** is only available when LiteLOC™ 2.0 is enabled.
To enable LiteLOC™ 2.0, calibration data must be entered in the projector.
- Changing the network configuration from Static IP to DHCP while the DHCP server is unavailable or the cable is unplugged causes the software to become unresponsive for approximately 90 seconds.
