

# Technical Bulletin

## Minimum bend radius for individual fibers and fiber bundles

This bulletin provides the minimum bend radius (MBR) required for individual fibers and fiber bundles for the affected products listed below.

Minimum bend radius = 200 mm

A radius less than the minimum bend radius increases the risk of breakage as the protective sheathing restricts bending but does not prevent breakage.

The following image shows the areas of concern where the radius must be greater than or equal to the minimum bend radius:

- From the rack exit
- To the projector entry
- Any bend in between
- Individual fibers inside the rack
