

# CHRISTIE® ENERGY ⚡ GUIDE

Product category

**Cinema projector**

Small-screen/boutique cinemas

Lumen range: 5,000-10,000

Series/model

**CP2411-RBe**

## Efficiency

Lumens per watt

**9.4** lm/w

**61%** 

Estimated **yearly operational cost-savings** over a Xenon projector of the same brightness class

**4,000**  
BTU/hour

**Best in class**

### Here's how we calculate these results:

We calculate energy efficiency as lumens/watt: The maximum power consumption of the projector model at 77 F (25 C) required for the total available brightness in lumens.

We calculate BTU load as the amount of air that needs to be extracted from the projector's environment for adequate system cooling.

We calculate the cost of operation on the projector model's efficiency, which depends on your local utility rates and use.

**Any  
questions** 

For a detailed breakdown on how much you can save on operating costs using this projector, please contact one of our cinema sales team. [christiedigital.com/cinema](http://christiedigital.com/cinema)
